

Entertainment designed for bathrooms, gardens and outdoor living.

Waterproof and weather-resistant televisions require the right model, mounting method, back-box dimensions, power, signal and ventilation plan. We specify and install the complete solution.

Designed, supplied, installed and supported by Riverside Audio Visual.

Every project begins with a conversation, a room survey and a clear specification. We coordinate with homeowners, architects, interior designers, builders and electricians from first fix through commissioning.

Choose the right waterproof television

A practical guide to the systems and decisions we can plan with you.

Bathroom and shower TVs	Purpose-designed waterproof displays for bathrooms, wet rooms, spas and pool areas, including mirror, black and white finishes.
Outdoor televisions	High-brightness, weather-resistant displays for covered terraces, gardens, hospitality spaces and poolside installations.
Sizes and finishes	We select the correct screen size and finish for the room rather than showing duplicate product cards for every variation.
Back mounting boxes	Technical drawings and back-box dimensions are checked before tiling, joinery and electrical work begins.
Sound and control	Discreet waterproof speakers, soundbars, remote controls, Control4 integration and app control can be included.
Professional installation	Survey, power and signal planning, ventilation, waterproofing coordination, mounting, setup and aftercare.

Ready to plan your project?

Email room photographs or drawings to sales@riversideav.co.uk. We will confirm the suitable television, finish, mounting box and installation requirements.
